

ENVIRONMENTAL POLICY

At KYASS, we consider managing the environmental impacts of our operations with a strong sense of responsibility and adopting sustainable production as an integral part of our corporate culture. All our operations are carried out in full compliance with applicable environmental legislation in Türkiye, primarily Environmental Law No. 2872 and its related regulations on waste, wastewater, air emissions, and climate.

We strengthen our environmental management approach in line with the ISO 14001:2015 Environmental Management System Standard and international industry standards. We monitor and reduce our environmental impacts through defined and measurable targets and continuously improve the effectiveness of our environmental management system. Minimizing waste generation, preventing pollution, ensuring the efficient use of energy and natural resources, and reducing greenhouse gas emissions are among our key priorities.

In this context, we are committed to raising environmental awareness among our employees and stakeholders, adopting preventive approaches by regularly monitoring environmental risks, and continuously improving our environmental performance.
